 4. Managing Stocks
 5. Tips and Tricks
 6. Troubleshooting
-

1. Getting Started

To start using the stock tracker:

- Open the program in your browser (it runs locally with Python Flask).
- If you're using the command line, navigate to the project folder and run:

```
python app.py
```

- The app will launch and open a page in your browser displaying your stock watchlist.
-

2. How to Use the App

- The app shows all the stocks currently in your watchlist with basic info: symbol, price, and percent change.
 - You can **add a new stock** by typing the stock symbol in the input box and clicking “Add Stock.”
 - To **see more details**, click on the stock name to expand information such as previous close, volume, 10-day average volume, and market cap.
 - To **remove a stock**, click the “Remove” button next to the stock.
-

3. Features

- **Live stock information** (updated via yfinance).
 - **Add stocks** easily with a single input.
 - **Remove stocks** when they’re no longer needed.
 - **Expandable details** for each stock.
 - **Prevent duplicate stocks** from being added.
-

4. Managing Stocks

Adding a stock:

1. Enter the stock symbol in the input box.
2. Press **Add Stock**.
3. If the stock is valid and not already added, it will appear in your watchlist.

Removing a stock:

1. Click the **Remove** button next to the stock.
2. The stock disappears from the watchlist (note: currently, it doesn't update the CSV file).

Viewing details:

- Click on the stock name to toggle detailed information.
-

5. Tips and Tricks

- Always enter the **correct stock symbol** in uppercase to avoid errors.
 - Avoid adding duplicate stocks—they won't be added again.
 - Start by tracking stocks you are familiar with to get a feel for the app.
 - Use the details section to analyze stock trends (volume, market cap, etc.).
-

6. Troubleshooting

Problem: App doesn't run

- Ensure Python 3.x is installed.
- Make sure all required libraries are installed (`yfinance`, `Flask`).

Problem: Adding a stock fails

- Check if the symbol exists and is valid in yfinance.
- Make sure the stock isn't already in your list.

Problem: Details don't show or list is empty

- Refresh the page.
- Make sure the Python server is running (`python app.py`).

Problem: Stock still shows in CSV after removal

- Currently, removing a stock only deletes it from the page.
- You'll need to implement CSV update logic to remove it from saved data.
